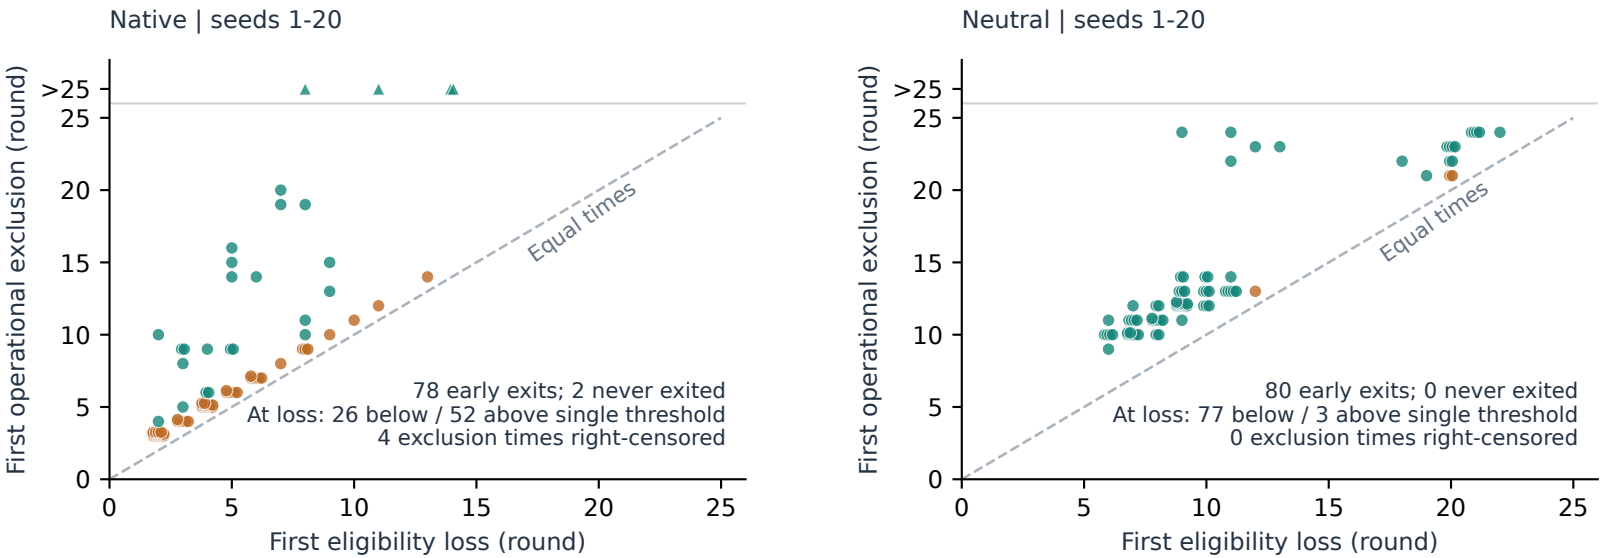
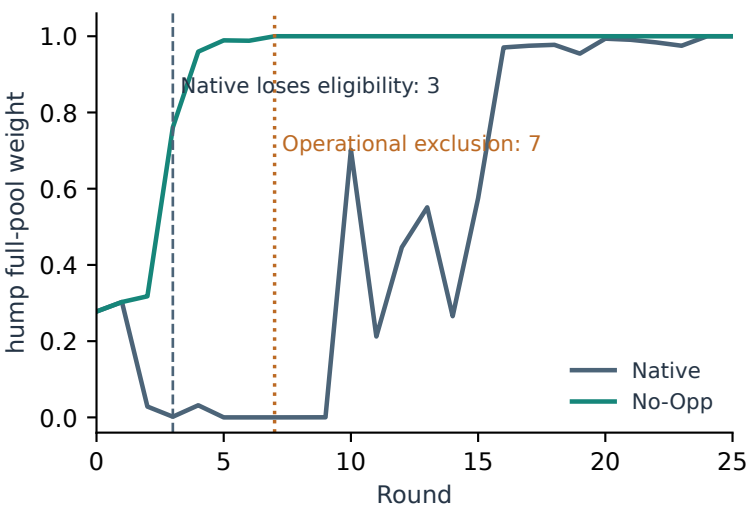
A Eligibility loss precedes operational exclusion in both strategies



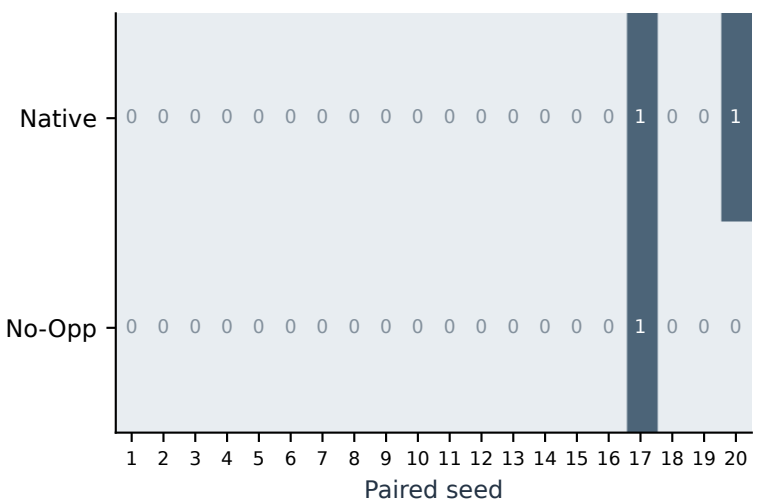
At loss: green = no single-round violation; orange = violation without two-round exclusion.
Triangles: no exclusion by round 25. Coincident observations are slightly offset.

B True-model trajectory | seed 20



Full-pool weight is not the pruning weight.
Pruning uses surviving-pool weight < 0.02.
No-Opp retains hump throughout.

C Paired ablation | seeds 1-20



True-model FI: 2/20 vs 1/20 (1 = event)
Alternative-model FI events: 78 vs 79
No evidence of a general risk increase
